FOOD SPACES

Flood

Mathieu Lehanneur's interior and furniture designs for Paris restaurant Flood attempt to match the quality of the international food with the quality of its air. To filter the space's air, Lehanneur placed an aquarium (above and opposite bottom) in the centre of each section of the interior that contains over 100 litres of *Spirulina Platensis*, or micro-algae. Through photosynthesis, the algae generates pure oxygen. He also created bespoke furniture based on the notion of flooding by dip-coating the PVC furniture and indicated the quality of the oxygen-enriched air via the blown-glass pendant lamps (below).
